

IP Prerequisite: Integrative Project Planning and Design

This prerequisite applies to

- ▶ BD+C: Healthcare (1 point)

INTENT

Maximize opportunities for integrated, cost-effective adoption of green design and construction strategies, emphasizing human health as a fundamental evaluative criterion for building design, construction and operational strategies. Utilize innovative approaches and techniques for green design and construction.

REQUIREMENTS

HEALTHCARE

Use cross-discipline design and decision making, beginning in the programming and pre-design phase. At a minimum, ensure the following process:

Owner's Project Requirements Document. Prepare an Owner's Project Requirements (OPR) document. Develop a health mission statement and incorporate it in the OPR. The health mission statement must address "triple bottom line" values—economic, environmental and social. Include goals and strategies to safeguard the health of building occupants, the local community and the global environment, while creating a high-performance healing environment for the building's patients, caregivers and staff.

Preliminary Rating Goals. As early as practical and preferably before schematic design, conduct a preliminary LEED meeting with a minimum of four key project team members and the owner or owner's representative. As part of the meeting, create a LEED® action plan that, at a minimum:

- Determines the LEED certification level to pursue (Certified, Silver, Gold, or Platinum);
- Selects the LEED credits to meet the targeted certification level; and
- Identifies the responsible parties to ensure the LEED requirements for each prerequisite and selected credit are met.

Integrated Project Team. Assemble an integrated project team and include as many of the following professionals as feasible (minimum of four), in addition to the owner or owner's representative.

- | | | |
|----------------------------------|---|--|
| • Owner's capital budget manager | • performance testing agents | • representatives |
| • Architect or building designer | • Green building or sustainable design consultant | • Civil engineer |
| • Mechanical engineer | • Facility green teams | • Landscape architect |
| • Structural engineer | • Physician and nursing teams | • Ecologist |
| • Energy modeler | • Facility managers | • Land planner |
| • Equipment planner | • Environmental services staff | • Construction manager or general contractor |
| • Acoustical consultant | • Functional and space programmers | • Life cycle cost analyst; construction cost estimator |
| • Telecommunications designer | • Commissioning agent | • Lighting Designer |
| • Controls designer | • Community | • Other disciplines appropriate to the specific project type |
| • Food Service Consultant | | |
| • Infection Control Staff | | |
| • Building science or | | |

Design Charrette. As early as practical and preferably before schematic design, conduct a minimum four-hour, integrated design charrette with the project team as defined above. The goal is to optimize the integration of green strategies across all aspects of building design, construction and operations, drawing on the expertise of all participants.

GUIDANCE

There are no substantive changes to the prerequisite requirements; refer to the LEED v4 reference guide, with the following addition:

Further Explanation**Connection to Ongoing Performance**

- ▶ LEED O+M IN credit Innovation: The final phase of the integrative process is the period of occupancy, operations, and performance feedback. Project teams can demonstrate their ongoing efforts in the LEED v4.1 O+M Integrative Process pilot credit.
