

SE06 ESTABLISH HEALTH ENTRY REQUIREMENTS | O (MAX: 1 PT)

Intent: Combat infectious respiratory diseases and support health building entry policies with requirements regarding vaccination, testing disclosure, and/or face covering requirements.

Summary: This feature requires projects to establish vaccination disclosure requirements or testing and masking requirements for occupants to utilize the space.

Issue: Emergency preparedness and resilience plans are critical to ensuring that organizations are equipped to immediately confront a crisis, as well as to recover successfully from it. Infectious disease epidemics have increased in the 21st century, involving fast global spread due to travel, trade and urbanization.^{39,40} For example, the COVID-19 pandemic infected 6 million people and spread to almost every continent within 5 months, impacting the social and economic livelihood of the global population on an incalculable scale.^{41,42}

Solutions: Re-entry plans after emergencies should consider employee needs, offer employees flexibility, assess critical infrastructure systems, communicate re-entry strategies to key stakeholders and re-evaluate existing policies, operations and protocols to support a healthy, safe and inclusive re-entry.^{104–113} In certain types of emergencies, including epidemics and pandemics, re-entry plans may need to consider relevant vaccination, testing, and other requirements (as applicable), including social distancing and use of personal protective equipment in order to help manage risks.¹⁴⁵

Part 1 Part 1 (Max: 1 Pt)

For All Spaces except Dwelling Units:

Projects located in a region with heightened risk of infectious respiratory disease transmission defined by a public health authority (e.g., World Health Organization, local public health agency) require at least one of the following for regular occupants to enter the space:

- a. Proof of vaccination or documented exemption (e.g., a medical or religious exemption), including necessary boosters as applicable, for the disease of heightened risk.
- b. Both of the following:
 1. Proof of negative diagnostic testing for the disease of heightened risk and, for eligible employees (as applicable), access to diagnostic testing at no cost.
 2. Face masks worn indoors by, at minimum, unvaccinated occupants. Face masks are available for all occupants.¹⁰⁴

Note: This feature is a beta strategy and has an additional documentation requirement (beta feature feedback form). The feedback form supports IWBI in developing new features that are effective and applicable to projects around the world.
