

MR Credit: Material Ingredients

1–2 Points

This credit applies to

- BD+C: New Construction
- BD+C: Core & Shell
- BD+C: Schools
- BD+C: Retail
- BD+C: Data Centers
- BD+C: Warehouses & Distribution Centers
- BD+C: Hospitality
- BD+C: Healthcare

INTENT

To encourage the use of products and materials for which life-cycle information is available and that have environmentally, economically, and socially preferable life-cycle impacts. To reward project teams for selecting products for which the chemical ingredients in the product are inventoried using an accepted methodology and for selecting products verified to minimize the use and generation of harmful substances.

REQUIREMENTS

Achieve one or more of the options below, for a maximum of 2 points.

Option 1. Material Ingredient Reporting (1 point)

Use at least 20 different permanently installed products from at least five different manufacturers (10 from three for CS and Warehouses & Distribution Centers) using any of the following programs to demonstrate chemical inventory to at least 0.1% (1,000 ppm):

- ANSI/BIFMA e3 Furniture Sustainability Standard
- Cradle to Cradle – Material Health Certificate at Bronze level or higher
- Declare – Red List Free, LBC Red List Free, or Declared labels (or LBC Compliant/LBC Red List Approved demonstrating content inventory to 0.1%)
- Facts – NSF/ANSI 336 (at any certification level)
- Global Green TAG – Product Health Declaration (PHD) labels issued after January 1, 2020
- Health Product Declaration (HPD) – complete, published, with full disclosure per HPD Open Standard
- Living Product Challenge – Declare label demonstrating inventory to 0.1%
- Manufacturer Inventory – publicly available inventory of all ingredients by name and CASRN/EC Number
- Product Lens Certification

Any compliant reports with third-party verification of content inventory are worth **1.5 products** for credit achievement calculations.

Option 2. Material Ingredient Optimization (1 point)

Use products with a compliant material ingredient report or action plan. Use at least 5 permanently installed products from at least three different manufacturers. Products are valued as follows:

Report Type & Criteria	Product Documentation	Report Verification	Valuation
Material Ingredient Screening and Optimization Action Plan	Action Plan based on publicly available material inventory to at least 1,000ppm	Prepared by manufacturer, signed by company executive	1/2 product
Advanced Inventory & Assessment: Inventory to at least 100 ppm and no GreenScreen LT-1 or GHS Category 1 hazards; OR 75% by weight assessed using GreenScreen	Cradle to Cradle Certified or MHC at Bronze; Declare Red List Free/LBC Red List Free; Green Seal GS-11; HPD (third-party verified); Living Product Challenge (Red List Free); Manufacturer Inventory (third-party verified)	Third-party verified	1 product
Material Ingredient Optimization: Inventory to 100 ppm and 95% by weight assessed via GreenScreen; No BM-1 hazards; remaining 5% screened via GS List Translator	Cradle to Cradle Silver or higher; HPD; Living Product Challenge (Imperative 09); Manufacturer Inventory (third-party verified)	Third-party verified	1.5 products
International Alternative Compliance Path (outside US): REACH Optimization – inventory to 100ppm with no substances on Annex XIV, XVII or SVHC candidate list	Global Green TAG PHD report	REACH report by manufacturer; PHD by Global Green TAG	1 product

For credit achievement calculation, products sourced within 100 miles (160 km) of the project site are valued at twice their base contributing number of products, up to a maximum of 2 products.

GUIDANCE – Behind the Intent

Beta Update

Changes in v4.1 reduce barriers for achievement while maintaining the overall approach:

- Option 1 maintains the threshold of 20 products for most BD+C types but allows 10 products for CS and Warehouse projects. Products with third-party verification of content inventory will be worth 1.5 products.
- The cost-based threshold for Option 2 has been removed to simplify credit achievement.
- Option 2 has been restructured to reward manufacturers at multiple steps along the path towards product material ingredient optimization.
- Option 3 (Product Manufacturer Supply Chain Optimization) has been removed and moved to the Pilot Credit Library.

- The limitation on structure and enclosure materials for cost calculation has been removed.

GUIDANCE – Calculations

Equation 2: Total number of products (Option 2)

Total # = {# Action Plans × 0.5 × location factor} + {# Advanced Inventory & Assessment × 1 × location factor} + {# Material Optimization × 1.5 × location factor}

Note: no single product may contribute more than 2× the product valuation. Location valuation factor = 2 for products within 100 miles.

GUIDANCE – Action Plan Requirements (Option 2)

A compliant Action Plan is developed by a manufacturer based upon product inventory to at least 1,000 ppm. Must include:

- Unique document ID, product type, product name(s), date of creation, expiration date (maximum 5 years)
- Description of inventory conducted including dataset, software, and screening platform
- Link to underlying publicly available inventory meeting Option 1 requirements
- Description of specific green chemistry principles targeted for implementation
- Table or summary of green chemistry principles targeted, with specific dates and timeline
- Contact information of responsible organizational representative
- Written narrative describing the action plan steps to address specific improvement areas

EXEMPLARY PERFORMANCE

- Option 1: Purchase at least 40 qualifying permanently installed building products from ten different manufacturers (20 from five for CS and W&D; Centers).
- Option 2: Purchase at least 10 qualifying products from five different manufacturers.

REQUIRED DOCUMENTATION

- Option 1: Use the LEED v4.1 MR building product calculator. Include GBCI-verified product ID numbers or copies of product inventory documents in LEED Online.
- Option 2: Use the LEED v4.1 MR building product calculator. Include ID numbers or copies of action plans and optimization reports in LEED Online.

CONNECTION TO ONGOING PERFORMANCE

- LEED O+M MR credit Purchasing: products meeting the above requirements can help achieve the MR credit Purchasing.
