

MR Credit: Sourcing of Raw Materials

1–2 Points

This credit applies to

- BD+C: New Construction
- BD+C: Core & Shell
- BD+C: Schools
- BD+C: Retail
- BD+C: Data Centers
- BD+C: Warehouses & Distribution Centers
- BD+C: Hospitality
- BD+C: Healthcare

INTENT

To encourage the use of products and materials for which life cycle information is available and that have environmentally, economically, and socially preferable life cycle impacts. To reward project teams for selecting products verified to have been extracted or sourced in a responsible manner.

REQUIREMENTS – Responsible Sourcing of Raw Materials

- Use products sourced from at least **three different manufacturers** meeting at least one responsible sourcing criterion below for at least **15%, by cost**, of the total value of permanently installed building products (1 point).
- Use products sourced from at least **five different manufacturers** meeting at least one responsible sourcing criterion below for at least **30%, by cost**, of the total value of permanently installed building products (2 points).

Responsible sourcing criteria:

- **Extended producer responsibility:** Products from a manufacturer participating in an EPR program. Valued at 50% of cost.
- **Bio-based materials:** Bio-based products (other than wood) tested using ASTM D6866 or ISO 16620-2, or certified to USDA BioPreferred Voluntary Labeling. Exclude hide products. Valued at 50% of cost × biobased content percentage.
- **Wood products:** Certified by Forest Stewardship Council or USGBC-approved equivalent. Valued at 100% of cost.
- **Materials reuse:** Salvaged, refurbished, or reused products. Valued at 200% of cost.
- **Recycled content:** Postconsumer recycled content plus one-half preconsumer recycled content, based on weight. Recycled fraction × cost of assembly. Valued at 100% of cost.

For credit achievement calculation, products sourced (extracted, manufactured and purchased) within 100 miles (160 km) of the project site are valued at twice their base contributing cost, up to a maximum of 200% of cost.

GUIDANCE – Behind the Intent

Beta Update

Option 1 of this credit in LEED v4 (Raw Material Source and Extraction Reporting) has been moved to the Pilot Credit Library. By removing Option 1, Option 2 is now worth two points in version 4.1. Minor updates better reward embodied carbon, renewable bio-based materials, and foster circular economies. The limitation on structure and enclosure materials has been removed.

GUIDANCE – Calculations

Criterion valuation factors:

- Bio-based products (basic criteria): 0.5 by cost
- Bio-based products (Sustainable Agriculture Standard): 1.0 by cost
- Wood products certified to FSC: 1.0 by cost
- Reused materials: 2.0 by cost
- Postconsumer recycled materials: 1.0 by cost
- Pre-consumer recycled materials: 0.5 by cost
- Extended Producer Responsibility: 0.5 by cost
- Location valuation factor (within 100 miles): 200% of base cost

Calculating bio-based material contributions:

50% × percent by weight of bio-based material in total product × Cost of Material

Calculating recycled content contributions:

[% Pre-Consumer × 50%] + [% Post-Consumer × 100%] × Cost of Material

Note: no single product may contribute more than 200% of cost. All product reports must be valid at the time the product was purchased for the project.

EXEMPLARY PERFORMANCE

- Purchase at least 45%, by cost, of the total value of permanently installed building products that meet the credit criteria.

REQUIRED DOCUMENTATION

- Submit the LEED v4.1 MR building product calculator and documentation of product claims for credit requirements for either 15% by cost or 30% by cost threshold.
- For products verified for LEED by GBCI, include ID numbers in the building product calculator.

CONNECTION TO ONGOING PERFORMANCE

- LEED O+M MR prerequisite Waste Performance, MR prerequisite Purchasing Policy, and MR credit Purchasing: A similar credit is required for the O+M v4.1 rating system.
