

SH05 PROMOTE A SMOKE-FREE ENVIRONMENT | O (MAX: 1 PT)

Intent: Deter smoking, minimize occupant exposure to secondhand smoke and reduce smoke pollution through interventions that prevent the use, sale and advertisement of tobacco products.

Summary: This feature requires projects to ban indoor smoking and ban or restrict outdoor smoking within its boundaries, as well as restrict the sale and marketing of tobacco products.

Issue: Tobacco is responsible for an estimated six million deaths per year globally among direct users, and serves as the cause of death for up to half of its users.^{172,173} In addition to those deaths caused by direct use, an estimated 890,000 annual deaths can be attributed to non-user exposure to second-hand smoke.¹⁷² Exposure to tobacco smoke persists to detrimentally affect the health of both smokers and those exposed to secondhand smoke. Ingredients in cigarettes form over 7,000 compounds when burned, of which at least 69 are known to be carcinogenic.¹⁷⁴ As a result, the average life expectancy of a smoker is 10 years less than that of a nonsmoker.¹⁷⁵ Furthermore, secondhand smoke exposes nonsmokers to the same contaminants, increasing the number of people subject to health risks from smoking. The thirdhand smoke (residual chemicals left on indoor surfaces by tobacco smoke) clings to walls, furniture, clothes, bedding, carpets and other surfaces long after smoking has occurred. Emerging evidence suggests that there are serious health consequences associated with exposure to thirdhand tobacco smoke,¹⁷⁶ secondhand marijuana smoke and emissions from e-cigarettes.^{177,178} Health issues associated with tobacco smoke include asthma attacks, respiratory infections, coronary heart disease, stroke, lung cancer and sudden infant death syndrome.¹⁷⁹ Smoking can also increase comorbidities for influenza such as chronic obstructive pulmonary disease (COPD) and COVID-19.¹⁴⁹ Despite such severe influences on health, 80% of the global population lives in countries not protected by 100% smoke-free regulations.¹⁸⁰

Solutions: There is no safe and acceptable level of cigarette smoke exposure.¹⁸¹ Therefore, the only way to protect people from secondhand and thirdhand smoke is to implement a 100% smoke-free environment.^{181–183} In order to prevent intrusion of cigarette smoke from the outdoors, projects must also take steps to ensure that smoking is not allowed in the vicinity of building entrances, operable windows and building air intakes.¹⁸⁴ Another influencing factor on tobacco use is an individual's proximity to outlets where it is sold.¹⁸⁵ Restricting the sale of tobacco on-site is a key strategy for preventing or curbing use of tobacco products as well as providing support to those trying to quit.^{185,186}

Part 1 Prohibit Indoor Smoking (Max: 1 Pt)

For All Spaces:

The following requirement is met:

- a. Smoking and the use of e-cigarettes is prohibited in interior spaces within the project boundary.¹²

Part 2 Prohibit Outdoor Smoking (Max: 0 Pt)

For All Spaces:

The following requirements are met:

- a. Clear and visible permanent signage prohibiting smoking and vaping is located within 10 ft of all functional building entrances, operable windows and building air intakes that open to any occupiable outdoor area.
- b. Clear and visible permanent signage describing the hazards of smoking is located in all outdoor areas designated for smoking and vaping.

Part 3 Limit Tobacco Availability (Max: 0 Pt)

For Retail Spaces:

The following requirements are met for projects where retail products are sold on a daily basis:

- a. Sale of tobacco products (including e-cigarettes) is prohibited.¹¹

b. Tobacco products (including e-cigarettes) are not marketed or promoted.¹²
