

A10 COMBUSTION MINIMIZATION | O (MAX : 1 PT)

Intent : Reduce human exposure to combustion-related air pollution from heating and transportation sources.

Summary : This WELL feature requires projects to utilize low-emission combustion products or eliminate combustion-based products entirely.

Issue : Combustion-related emissions, mostly from space heating, cooking and nearby transportation, are often a major and overlooked source of indoor air pollution.¹ Inefficient heating practices, cooking or other combustion activities produce high levels of indoor air pollution that include a range of health-damaging pollutants, such as fine particles, nitrogen dioxide and carbon monoxide.² In addition to nausea, loss of consciousness and death³, inhalation of elevated levels of carbon monoxide is linked to headaches, visual impairment, reduced cognitive functioning and the ability to perform complex tasks⁴.

Solutions : Opting for non-combustion or low-emission combustion products is an important first step toward the reduction of carbon monoxide, nitrogen dioxide, small particles and other combustion by-products in the air.⁵

PART 1 MANAGE COMBUSTION (MAX : 1 PT)

For All Spaces except Commercial Kitchen Spaces:

1: Appliance and heater combustion ban

The following requirements are met for combustion-based fireplaces, stoves, space heaters, ranges and ovens:

- a. Are not used in indoors.⁶
- b. If located outdoors, only use natural gas / propane and are located at least 3.3 m from the building⁸

2: Low-emission combustion sources

Equipment used by the project for heating, cooling, water heating, process heating or power generation (including back-up, if used for more than 200 hours per year) meets one or more of the following requirements:

- a. Comply with California's South Coast Air Quality Management District emission rules for pollution.⁷
- b. Are electric.
- c. Are supplied by district heating or cooling.

3: Engine exhaust reduction

The following requirement is met:

- a. Vehicle engine idling for more than 30 seconds is prohibited in all pick-up, drop-off and parking areas at the building site controlled by the project. "No idling" signage is present at these locations indicating this rule.
